*Cover photo:* A 67-year-old man with acute lower gastrointestinal bleeding and hematochezia. An origin of bleeding near the right colonic flexure caused by angiodysplasia is demonstrated. From “Detection of gastrointestinal bleeding by using multislice computed tomography—acute and chronic hemorrhages” by E. Amarteifio, C. Sohns, M. Heuser, M. Püsken, B. Lange, S. Obenauer on pages 1–5 in this issue.
